ACKNOWLEDGMENTS

In this long journey of PhD, I met many special people who have helped either directly or indirectly without whom this journey would not have been smooth and successful. I take this opportunity to thank each one of them for lending their help in many ways.

First, I would like to mention my heartfelt gratitude to my advisor Prof. Patrick Onck who has given me this wonderful opportunity to pursue doctoral research and for teaching many lessons to become a better researcher. I thank you Patrick, for the freedom that you have given, the moral support that you have bestowed upon me in the times of difficulty and also for teaching me the importance of being critical of my own work. I am and will always be grateful to you for showing me the way to do scientific research, teaching me the skills of presentation and above all for being a nice human being with an ever smiling and welcoming approach. Many thanks to Susanne, Max and Jasper for their hospitality when we visited your house. I thank Prof. Erik van der Giessen, the head of the micromechanics group for nurturing an excellent research environment in the group which allows for freedom of thought and contributes to the scientific growth of individuals. I also thank him for his suggestions and criticism not only during $\mu\text{Me}\chi$ meetings, but also whenever I approached him for an advice. In retrospect, I can not recollect a single $\mu\text{Me}\chi$ meeting where I did not receive at least one new idea for the progress of my research. The association with the $\mu\text{Me}\chi$ group taught me many interpersonal skills in addition to science for which I am grateful to both Erik and Patrick and I wish to continue our collaboration in the future as well.

Next, I would like to thank Prof. John Hutchinson, Prof. Marc Geers and Prof. Wilhelm Huck for accepting to read my thesis and giving their valuable suggestions and comments despite their busy work schedule. Although my PhD work is completely theoretical (in fact numerical), the motivation to this work comes from experiments. I am fortunate to have collaborated with Prof. Wilhelm Huck and his team at Cambridge University who have provided the experimental data required for our work and also inviting us to visit their lab in Cambridge. Another important collaboration with Prof. Oliver Schmidt and Dr. Yongfeng Mei of IFW Dresden, Germany was a unique opportunity for me to learn about new micro- and nanosystems. I take this opportunity to thank Prof. Schmidt and Dr. Mei for readily accepting our proposal to collaborate. Without the above two fruitful collaborations my PhD thesis would not have taken this shape and I am fortunate to have had the opportunity to col-

laborate with such experts in their respective fields of research. I also would like to thank Dr. Siamak Shishvan for his help in preparing the schematics in chapter 1 and chapter 4. I would like to thank Jorn Veenstra and Janet Mook for the translation of the dutch summary. I appreciate Siva Saane's help in sending the thesis to colleagues and other researchers. My special thanks to Sriram and Sandeep for accepting to be my paranymphs and helping me with the logistics of my defence ceremony.

Next, I would like to thank Mrs. Ria Sibma, for her help in handling official matters and helpful suggestions during my stay in Groningen. I would also like to thank our system administrators Martin, Radu and Dogan for their excellent cooperation. Dogan, thank you very much for helping me with the network problems with bundles of patience while I was working from India. That's truly very nice of you and I respect you for the professionalism that you have demonstrated. I would like to thank my μMeX colleagues Angelo Simone, Cihan Tekoglu, Sergey Yefimov, Teun van Dillen, Andreas Widjaja, Monica Bulacu, Liesbeth Huisman, Yor Limkumnerd, Sietze van Buuren, Ashok Mohanta, Jorn Veenstra, Goran Zagar, Can Ayas, Shyamal Roy, Subhradeep Chatterjee, Ranjeet Kumar, Siamak Shishvan, Sandeep Namdeo, Siva Saane, Syed Khaderi and Kodanda Mangipudi for their association during my stay in the group. You all have been wonderful colleagues and I have learned many things from each one of you for which I will always be thankful. I cherish the memories of our association in Groningen throughout my life. The non-scientific discussions during lunch time, being elected as a Nerd due to the strong lobbying done by Cihan and also the holy tradition of Nerds dinner are few such sweet memories that I carry along with me. A special thanks to Ranjeet for his help on the stuff related to computers as well as personal. Thanks to Syed for his help with the corrected manuscript while I was in India. Kodanda has been a special person through out my stay in Groningen. His out of box thinking and respect for friendship will stay always close to my heart and I am fortunate to have met such a friend in my life.

Coming to non-scientific life in Groningen, it has been full of fun, excitement and new friendships. Surely, Groningen Indian Students Association (GISA) played a big role in my non-scientific life in Groningen. I thank all the Indians in Groningen for giving me the opportunity to lead GISA as its first president during which I have made many new friends. I never felt home sick due to the warmth and affection shown by all of you. The journey was so overwhelmingly joyful with the association of many friends and most importantly due to Raj-Shirisha, Sunil-Sindhu, Naveen-Smitha, Sriram-Vidya, Kodanda-Madhuri, Ravi, Pramod-Narmada, Prashant-Aradhana, Ranjeet-Kavita, Aneesh, Fiaz, Deepa, Anjali, Vimal, Avinash-Shilpa, JaiPrakash-Ruchi, Mr. & Mrs. Dhar, Anuroopa-Dinesh, Anartha-Nivedita, Anil, Vinay-Chetna, Hans, Pranav-Vaishali, Loknath-Ruchi, Samta, Harsh, Sasanka, and Sharma. Few special moments such as our Saturday tea in Grotemarkt with Raj-Shirisha, numerous dinners at Mandems, discussions on politics with Sriram are the sweet memories that live with us for the rest of our lives. I thank you all for all your help, friendship and for many qualities that I have learned from you. Kalyani and I will always cherish your hospitality whenever we visited your houses. We are missing Groningen a lot and we will never be able to forget Groningen for it's the birth place of Haasini. I would also like to thank the people of The Netherlands for their friendly and frank nature-Groningen truly feels like a second home now!

I admire my parents for the freedom that they have given me in chasing and fulfilling my dreams. I thank both of them for their efforts in giving me the best education beyond their abilities and the sacrifices that they have made in their lives. I am fortunate to have them supporting me throughout my life in whatever endeavor that I take up. I also thank my brothers Satish and Kishore, my in-laws, my grand mother, my aunt, Narayana, Ganababu, Surendra and Sameer for their unconditional support.

Last, but not the least, I would like to thank my wife Kalyani for her love, care and the sacrifices she made in her career to enable me fulfill my dreams. My little daughter Haasini needs a special mention for her stress relieving tactics with her smile and less obvious questions.

A. Ratne Kumar
